

Water quality monitoring

Green Blue Corporation

Summary of technology

- Water quality monitoring system: Introducing smart technology to an industrial park and integrating fine bubble technology (water quality improvement and wastewater treatment technology).

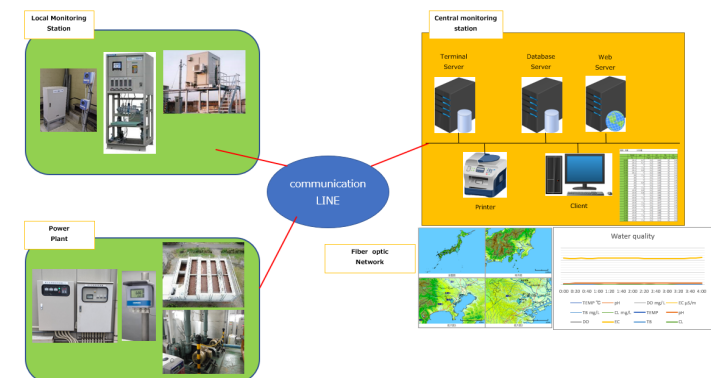

1) Fine bubble for Oxygen Application

- Water purification by promoting microbial activity
- Anti-odor measures (Rotten odor, Hydrogen sulfide etc.)

- 2) Fine bubble for Ozone Application
 - Deodorization Decolorization
 - Modification of persistent substances

Technology features / advantages

- It can provide from consulting stage to actual technology provision.
- It can properly collect data and visualize for analysis.
