

# Efficient wastewater treatment system utilizing microbubbles

HINODE SANGYO CO., LTD.

## Summary of technology

- Micro bubbling aeration promotes efficient organic matter degradation with activate microbe
- Efficient separation of sludge from water
- Applicable various type of wastewater
- Directly dischargeable to sewerage

## Technology features / advantages

- Required area is small and power consumption can be reduced.
- Reduction of labor costs by maintenance-free
- Reduce troubles such as clogging pipes
- Improvement of oxygen dissolution efficiency and suppression of sludge generation
- Suppresses the generation of odor
