

Metro Cebu - Yokohama Workshop for Sustainable Development

Date: November 6, 2025

Time: 9:00~16:30

Venue: Assembly Hall at Cebu Provincial Capitol

Main Theme:

- ✓ Sharing sustainable development initiatives in the Metro Cebu area and Yokohama City (decarbonization, waste management, water environment)
- ✓ Business matching and networking between the Metro Cebu and Yokohama City's private companies

Background:

In the face of global challenges such as climate change, the role of cities has become increasingly vital. Since 2012, Metro Cebu and the City of Yokohama, Japan have built a strong partnership through initiatives such as supporting the formulation of metropolitan-wide development plans, working together toward sustainable urban development.

This year, with support from Japan's Ministry of the Environment and JICA, Yokohama is implementing several collaborative projects with Metro Cebu. These include:

- Advanced centralized treatment through desludging and collection
- Realization of water circulation through sewerage development planning
- Introduction of green energy with low environmental impact and high resilience
- Promotion of recycling systems for household plastic waste and other materials

These initiatives represent essential solutions for cities aiming to become environmental leaders, and they hold great promise for Metro Cebu's sustainable future.

To accelerate these efforts, we are organizing a workshop that will bring together local governments, private sector organizations, and international institutions from across Metro Cebu.

This event will serve as a platform to share Yokohama's latest solutions and explore new opportunities for collaboration.

We warmly invite you to join us in this important dialogue and take part in shaping a more sustainable and resilient future for our cities.

Pre-registration required
